

### MOBILE CLEANING UNIT

The RENOWN™ Mobile Cleaning Unit is a battery-powered mobile, self contained cleaning system designed for portable cleaning applications such as restrooms, locker rooms and trash areas. The unit provides both cleaning and sanitizing functions, as well as clean water rinsing through low pressure (<100psi) spray nozzles.

The Mobile Cleaning Unit has the capability to accurately and consistently dilute and dispense up to four different Renown™ Sureblend products in ½ gallon packaging stored on the unit. Just fill the 12 gallon tank with fresh water and your ready to go!

Designed to make automated, touchless cleaning more accessible to a broader range of cleaning applications (and cleaning budgets) The intuitive layout and function of the MCU couldn't be simpler to operate. You can clean an area in four easy steps:

1. Select appropriate chemical via the select valve
2. Apply chemical
3. Rinse (after allowing appropriate chemical dwell-time)
4. Squeegee any remaining water into floor drain or recover with a microfiber mop or cloth

There are no cumbersome power cords or vacuum hoses, when you are finished cleaning you simply move on to the next location. With its compact size (24" W x 39" H x 35" L) and large, easy-roll rear wheels the MCU is truly mobile, and the locking front casters provide excellent maneuverability and added safety.

At a flow rate of ½ gallon / minute the MCU can run for 24 minutes on a full tank of water (a typical 6-fixture restroom requires 3 minutes of spray time to clean, rinse and sanitize). Powered with a 12volt lead-acid maintenance-free (sealed) battery the unit will run for up to 180 minutes on a full charge. That's up to 60 restrooms on a full charge!

With its battery power source the MCU can be used both inside and outside, no need to worry about access to a power outlet. Recharging the unit after use couldn't be more convenient, simply plug the on-board battery charger into any power outlet, no need to return to a base-location for battery charging.

#### Specifications:

Solution Tank: 12 gallon  
Solution Hose: 15ft.  
Flow Rate: ½ gal per min  
Pressure: 100 psi  
Battery Operated  
On Board Battery Charger  
Variable Dilution rates
